

Humpback Whales and Ship Noise

Fabian Blasch

06/08/2022

1 Data and Descriptive Statistics

```
# import data (this dataset is unfortunately not public)
openxlsx::read.xlsx("../Data/Humpback_Whales_Data.xlsx") -> dat_whale

# fist a quick look at the missing values in the data
sapply(dat_whale, \(x) sum(is.na(x))) |> knitr::kable(col.names = "NAs")
```

	NAs
Individuum	0
Treatment	0
Szenario	0
ruhezeit	0
speed	5
Atem	0

```
# harmonize names
colnames(dat_whale) <- tolower(colnames(dat_whale))

# to numeric
lapply(dat_whale[, c("ruhezeit", "speed", "atem")], as.numeric) -> dat_whale[, c("ruhezeit", "speed", "atem")]

# to factor
lapply(dat_whale[, !(colnames(dat_whale) %in% c("ruhezeit", "speed", "atem"))],
       as.factor) -> dat_whale[, !(colnames(dat_whale) %in% c("ruhezeit", "speed", "atem"))]

# relevele
factor(dat_whale[, "szenario"],
       levels = c("Before", "During", "After")) -> dat_whale[, "szenario"]
factor(dat_whale[, "treatment"], c("Control", "Medium", "High")) -> dat_whale[, "treatment"]

# add log
within(dat_whale,{
  logspeed <- log(speed)
  atem[atem == 0] <- 0.001
  ruhezeit[ruhezeit == 0] <- 0.001
